

Personalized Learning World PRD

Product Requirements Document

Product Name: Working title: Personalized Learning World

Version: 1.0

Owner: Master Alejandro

Document Purpose: Define the product vision, user experience, site layout, MVP scope, and future roadmap for a child-centered learning app that keeps parents connected to their child's development.

1. Product Vision

Personalized Learning World is a child-focused learning experience that helps children transition from learning at home to learning in school while keeping parents meaningfully connected to their development.

The child begins by building a personalized character and environment through simple, playful onboarding questions such as name, age, theme, vibe, music, and style. These choices shape the child's learning world. After the world is created, the child enters their first learning game. The app then learns from gameplay, tracking strengths, opportunities, engagement, and progress over time.

The parent remains part of the journey through a simple companion experience that shows what the child is learning, where they are growing, and what can be practiced at home.

The product is not only a game platform. It is a bridge between home learning and school learning.

2. Core Concept

A child and parent create a personalized learning world together.

The child chooses who they are in the world:

- Name
- Character
- Theme
- Vibe
- Music
- Style

The parent helps guide the setup:

- Age

- School readiness stage
- Optional learning goals
- Session length preference

Once the setup is complete, the app reveals the child's personalized room and character. The character then follows the child into their first learning game.

The first game is not just entertainment. It quietly observes how the child performs and begins building a learning profile based on real gameplay.

3. Problem Statement

Parents often support their child's earliest learning at home. They help with letters, numbers, colors, shapes, reading, basic routines, and confidence. When the child starts school, the parent may suddenly feel disconnected from much of the child's learning and development for 6 to 8 hours a day.

At the same time, many children need learning experiences that feel personal, playful, and emotionally safe. They may lose interest if learning feels like testing too soon.

This product solves both problems by creating a child-led learning world that feels fun and personal, while giving parents simple insights into the child's strengths, opportunities, and progress.

4. Target Users

Primary User: Child

The child is the main user of the learning experience.

The child needs:

- A simple and fun experience
- Age-appropriate learning games
- A sense of ownership
- A character they can connect with
- Encouragement, not pressure
- A world that feels like theirs

Secondary User: Parent or Guardian

The parent supports the child's journey and views progress.

The parent needs:

- Simple visibility into development
- Clear strengths and opportunities
- Suggested at-home practice
- Confidence that the child is learning safely
- A way to stay connected without interrupting the child's independence

Future User: Teacher or Educator

Teachers are not the focus of the MVP, but the product could eventually support school readiness and classroom-aligned insights.

5. Product Goals

MVP Goals

1. Let a child and parent create a personalized learning world together.
2. Keep onboarding playful and simple.
3. Use age to set the starting difficulty.
4. Use theme, vibe, music, and style to shape the character and room.
5. Launch the child into a first learning game.
6. Track basic performance during gameplay.
7. Show the parent a simple summary of strengths and opportunities.
8. Keep the site layout simple, clean, and buildable.

Long-Term Goals

1. Build a fully adaptive learning journey.
 2. Let the child's character grow over time.
 3. Let the room and environment evolve based on progress.
 4. Recommend games based on strengths and opportunities.
 5. Create a parent dashboard that supports at-home learning.
 6. Support the transition from home learning to school learning.
 7. Keep learning emotionally encouraging and personalized.
-

6. Product Principles

1. Personal Before Educational

The child should first feel like they are creating a world, not taking an assessment.

2. Learning Through Play

The app should detect strengths and opportunities through games rather than asking the child what is easy or hard.

3. Parent as Partner

The parent should be included without taking control away from the child.

4. Simple First, Expand Later

The first version should protect the full vision while using a simple layout and buildable interactions.

5. Encouragement Over Pressure

The product should avoid making children feel judged. Language should be supportive, warm, and motivating.

7. Site Layout Overview

The first version should use a simple, guided layout.

Main Site Flow

1. Landing Page
2. Start Setup
3. Character Selection
4. World-Building Questions
5. World Reveal
6. First Game
7. Game Results
8. Parent Summary
9. Returning User Home

The layout should feel magical, but the technical build should remain controlled.

The design can use cards, icons, simple illustrations, background color changes, and character previews instead of complex animation in Version 1.

8. Updated Site Map

Public Pages

- Landing Page
- About the Experience
- Parent Value Section
- Start Button

Child Setup Pages

- Name Entry
- Age Selection
- Character Selection
- Theme Selection
- Vibe Selection
- Music Selection
- Style Selection
- World Reveal

Gameplay Pages

- First Game Intro
- First Game Screen
- Game Completion Screen

Parent Pages

- Parent Summary
- Strengths and Opportunities
- Suggested At-Home Practice
- Progress Snapshot

Returning User Pages

- Child Home Room
 - Continue Learning Button
 - Character Progress
 - Parent Dashboard Entry
-

9. Detailed User Journey

Step 1: Landing Page

The user arrives at a clean landing page.

Purpose

Introduce the app in a simple, emotional way.

Page Elements

- Logo
- Short description
- Primary call-to-action button
- Parent value statement
- Optional preview image of character and room

Example Copy

Headline:

Build a learning world that grows with your child.

Subheadline:

Create a character, choose a world, and start a learning journey that helps parents stay connected as children grow from home learning into school.

Primary Button:

Start Your Adventure

Secondary Parent Message:

Made for children. Built to keep parents connected.

Step 2: Parent and Child Start Setup

Before the child begins, the experience should position setup as collaborative.

Purpose

Make it clear that the child and parent can build the first learning profile together.

Page Elements

- Short welcome message

- Parent guidance note
- Start setup button

Example Copy

Let's build your learning world together.

Grown-ups can help with age and setup. Kids get to choose the character, style, music, and world.

Step 3: Name

The child enters a name or character name.

Question

What should we call your character?

Purpose

Personalizes the experience and makes the child feel ownership.

Output

- Character name
 - Personalized text throughout the journey
 - Parent summary references the child's character name where appropriate
-

Step 4: Age

The parent or child selects the child's age.

Question

How old are you?

Purpose

Sets the starting difficulty level.

Age-Based Starting Levels

Age Range	Starting Focus
3 to 4	Colors, shapes, matching, simple counting

Age Range	Starting Focus
5 to 6	Letters, sounds, numbers, patterns, simple memory
7 to 8	Reading basics, addition, subtraction, logic, sorting
9 to 10	Vocabulary, problem-solving, multi-step thinking, math fluency
11 to 12	Logic, reading comprehension, strategy, advanced patterns

Notes

The child should not see this as a test. Age should quietly help the app choose the correct starting point.

Step 5: Character Selection

The child chooses a base character.

Purpose

Creates emotional connection and a learning companion.

Character Options for MVP

- Explorer
- Hero
- Artist
- Athlete
- Scientist
- Wizard

Output

The selected character appears in the room reveal and follows the child into the first game.

Step 6: Theme Selection

The child chooses the world theme.

Question

Pick your world.

Theme Options for MVP

- Space
- Jungle
- Ocean
- Castle
- City
- Candy Land
- Sports Arena
- Music Studio

Purpose

Changes the environment around the character.

Output Examples

Theme	Environment Changes
Space	Stars, planets, dark sky, spaceship details
Jungle	Trees, vines, animals, earthy room accents
Ocean	Waves, bubbles, sea creatures, blue background
Castle	Stone walls, banners, treasure chest, fantasy lighting
City	Skyline, street signs, bright room details
Candy Land	Candy colors, sweets, playful objects
Sports Arena	Field, scoreboard, sports equipment
Music Studio	Instruments, speakers, sound waves

Step 7: Vibe Selection

The child chooses the feeling of the adventure.

Question

What kind of adventure do you want?

Vibe Options for MVP

- Chill
- Brave
- Funny

- Magical
- Fast
- Cozy

Purpose

Changes the tone of the experience.

Output Examples

Vibe	Experience Effect
Chill	Softer prompts, calmer pacing
Brave	Heroic encouragement, challenge language
Funny	Playful reactions and silly encouragement
Magical	Sparkles, fantasy wording, mystery feel
Fast	Energetic wording, quick-start flow
Cozy	Warm messages, soft visuals, relaxed tone

Step 8: Music Selection

The child chooses the sound style.

Question

What should your world sound like?

Music Options for MVP

- Calm
- Upbeat
- Adventure
- Silly
- No music

Purpose

Sets the audio preference for the environment.

MVP Note

Version 1 may not need full audio implementation. Music can first be stored as a preference and displayed on the world reveal screen. Actual sound can be added in a later version.

Step 9: Style Selection

The child chooses a style for their character.

Question

What should your character look like?

Style Options for MVP

- Hero
- Explorer
- Artist
- Athlete
- Gamer
- Wizard
- Scientist

Purpose

Dresses or visually changes the character.

MVP Execution

In Version 1, style can be represented by:

- Character card image
- Outfit label
- Accessory icon
- Color accent

Full dress-up animation can come later.

10. World Reveal Page

After onboarding, the app reveals the personalized world.

Purpose

Create a magical payoff for the child's choices.

Page Elements

- Character preview
- Character name
- Selected theme
- Selected vibe
- Selected music
- Selected style
- Start first game button

Example Copy

Your world is ready.

Meet Nova the Explorer. Your Space world is set to a Brave adventure with upbeat music.

Button:

Start First Game

MVP Visual Approach

The room should update using simple visual rules:

- Background changes by theme
- Accent color changes by vibe
- Character card changes by style
- Music preference appears as an icon or label
- Decorative elements appear around the room

This gives the feeling of a custom-built world without requiring complex animation.

11. First Game Experience

The first game begins after the world reveal.

Purpose

Start the learning journey and quietly detect strengths and opportunities.

Key Rule

Do not ask the child what is easy or hard before the first game.

The app should learn through gameplay.

First Game Requirements

The first game should:

- Match the child's age range
- Start easy to build confidence
- Use encouraging feedback
- Track correct and missed answers
- Track hints used
- Track time per question
- Keep the session short
- End with positive reinforcement

Suggested MVP Game Type

A simple matching or choice-based game is recommended for Version 1.

Examples:

- Match the shape
- Pick the correct letter
- Count the objects
- Choose the missing pattern
- Match the word to the picture

Game Difficulty Rules

- Start below or at expected age level
- Increase slightly after several correct answers
- Offer help after repeated misses
- Do not punish mistakes
- Use missed answers to create opportunity tracking

12. Learning Detection System

The app should build a learning profile based on gameplay behavior.

Data Tracked in MVP

Data Point	Purpose
Correct answers	Identifies early strengths
Missed answers	Identifies practice opportunities

Data Point	Purpose
Time per question	Detects confidence or hesitation
Hints used	Shows where support may be needed
Repeated misses	Flags learning gaps
Completed game	Tracks engagement

Strength Detection

A skill can be marked as a strength when the child:

- Answers correctly multiple times
- Uses few or no hints
- Responds within an expected time range
- Completes the task with confidence

Opportunity Detection

A skill can be marked as an opportunity when the child:

- Misses similar questions repeatedly
- Uses hints often
- Takes much longer than expected
- Avoids or struggles with a certain task type

Tone Requirement

The app should avoid negative language.

Use:

- Practice area
- Opportunity
- Next growth step
- Skill to build

Avoid:

- Weakness
- Failure
- Bad score
- Behind

13. Game Completion Screen

After the first game, the child sees a positive completion screen.

Purpose

Celebrate progress and encourage continued play.

Child View

The child should see:

- Character celebration
- Encouraging message
- Simple reward or badge
- Continue button

Example Copy

Great start, Nova.

Your character learned something new today.

Reward:

First Journey Badge

Parent View Prompt

After the child screen, the parent can view a simple summary.

Button:

Show Grown-Up Summary

14. Parent Summary Experience

The parent summary is a core part of the home-to-school bridge.

Purpose

Help parents stay connected to the child's learning without overwhelming them.

MVP Parent Summary Sections

Section	Description
Today's Journey	Shows what the child played
Strengths	Shows skills the child handled well
Opportunities	Shows skills to practice
At-Home Idea	Gives one simple activity parents can do with the child
Engagement Snapshot	Shows whether the child completed the game and stayed engaged

Example Parent Summary

Today's Journey

Nova played a shape and pattern matching game.

Strengths

Nova did well with visual matching and simple patterns.

Opportunity

Nova can practice counting objects up to 10.

At-Home Idea

During snack time, ask Nova to count five crackers or fruit pieces.

Engagement Snapshot

Nova completed the first game and stayed engaged through the session.

15. Parent and Child Collaboration Loop

The product should support an ongoing loop between parent and child.

Core Loop

1. Parent and child create the learning world together.
2. Child plays age-appropriate games.
3. App tracks strengths and opportunities.
4. Parent receives simple learning insights.
5. Parent supports practice at home.
6. Child returns and continues learning.
7. Character and environment evolve over time.

Product Meaning

The child gets independence.

The parent gets visibility.

The app becomes the bridge between home learning and school learning.

16. Returning User Experience

After the first session, returning users should land in the child's personalized room.

Child Home Room

The child sees:

- Their character
- Their room
- Progress badge
- Continue Learning button
- Optional next mission

Parent Entry

The parent can access:

- Progress summary
- Strengths
- Opportunities
- Suggested at-home practice

MVP Returning Layout

Keep this simple:

- Top navigation
 - Character room card
 - Continue button
 - Parent summary card
-

17. Updated Layout Requirements

The first version should avoid overly complex layouts.

Layout Style

- Simple single-page sections
- Large cards
- Clear buttons
- Minimal navigation
- Soft rounded corners
- Friendly illustrations
- Mobile-friendly structure
- Simple progress indicator during onboarding

Recommended Page Structure

Landing Page Layout

1. Header with logo
2. Hero section
3. Short product description
4. Primary button
5. Parent connection section
6. Simple preview of character and room

Onboarding Layout

1. Progress bar
2. One question per screen
3. Large answer cards
4. Character preview on the side or top
5. Next button

World Reveal Layout

1. Large room preview
2. Character card
3. Selected preferences summary
4. Start game button

First Game Layout

1. Game title
2. Character encouragement text
3. Main question area
4. Answer options

5. Progress count
6. Hint button

Parent Summary Layout

1. Today's Journey card
 2. Strengths card
 3. Opportunities card
 4. At-home practice card
 5. Continue or exit button
-

18. MVP Feature Requirements

P0 Requirements

These must be included in the first version.

Landing Page

- Display logo
- Display short description
- Display start button
- Display parent connection message

Onboarding

- Collect name
- Collect age
- Let child choose character
- Let child choose theme
- Let child choose vibe
- Let child choose music preference
- Let child choose style

Personalization

- Save selected options
- Generate simple world reveal
- Display character name
- Display selected theme, vibe, music, and style
- Set starting difficulty based on age

First Game

- Launch one age-appropriate game
- Track correct answers

- Track missed answers
- Track basic completion
- Display positive completion message

Parent Summary

- Show game played
 - Show basic strengths
 - Show basic opportunities
 - Show one at-home practice suggestion
-

P1 Requirements

These should come after MVP if time allows.

- Multiple first game types
 - More character options
 - More environment decorations
 - Basic reward system
 - Character reactions
 - Parent dashboard history
 - Session streaks
 - Basic next-game recommendation
-

P2 Requirements

These are future vision features.

- Fully adaptive learning paths
 - Dynamic room upgrades
 - Character growth over time
 - Multiple subjects
 - Parent account system
 - Teacher mode
 - Voice encouragement
 - Rich animations
 - Music playback
 - School readiness reporting
 - Personalized curriculum mapping
-

19. Data Model for MVP

Child Profile

Field	Description
childName	Name or character name
age	Child's age
ageRange	Derived learning level
character	Selected base character
theme	Selected world theme
vibe	Selected experience tone
music	Selected music preference
style	Selected character style
createdAt	Profile creation date

Game Session

Field	Description
sessionId	Unique game session ID
childId	Linked child profile
gameType	Type of game played
ageRange	Difficulty level used
correctAnswers	Number of correct answers
missedAnswers	Number of missed answers
hintsUsed	Number of hints used
completionStatus	Completed or not completed
timeStarted	Start time
timeCompleted	End time

Learning Insight

Field	Description
childId	Linked child profile
strengthSkill	Skill marked as strength
opportunitySkill	Skill marked as opportunity
recommendation	Suggested next practice
parentMessage	Parent-friendly summary

20. Basic Adaptive Logic for MVP

Age Setup Logic

When the child selects age, the app assigns a starting level.

Example:

- Age 3 to 4: Level A
- Age 5 to 6: Level B
- Age 7 to 8: Level C
- Age 9 to 10: Level D
- Age 11 to 12: Level E

Gameplay Logic

During the first game:

- Correct answer increases skill confidence
- Missed answer marks possible opportunity
- Hint used lowers confidence slightly
- Fast correct answer increases confidence
- Repeated missed skill becomes a parent practice suggestion

Recommendation Logic

After the game:

- Highest-performing skill becomes a strength
- Lowest-performing skill becomes an opportunity
- Opportunity maps to one at-home activity

21. Design Direction

Visual Feel

The product should feel:

- Warm
- Playful
- Safe
- Personal
- Encouraging
- Lightly magical
- Simple enough for children
- Trustworthy enough for parents

Style Direction for MVP

Use:

- Friendly rounded cards
- Large buttons
- Soft backgrounds
- Simple icons
- Character illustrations
- Theme-based accent colors
- Clear spacing
- Minimal text on child screens

Avoid:

- Crowded dashboards
 - Heavy animations in Version 1
 - Too many choices per screen
 - Complex menus
 - Test-like language
 - Overly academic presentation
-

22. Content and Tone Guidelines

Child-Facing Tone

Use:

- Friendly language
- Short sentences
- Encouragement
- Wonder and play

Examples:

- Your world is ready.
- Great start.
- Let's try another one.
- Your character learned something new.
- Keep going, explorer.

Parent-Facing Tone

Use:

- Clear language
- Calm insight
- No judgment
- Practical suggestions

Examples:

- Today's activity showed strong visual matching.
- Counting objects may be a good practice area.
- Try a quick counting activity during snack time.

23. Safety, Privacy, and Trust Considerations

Because the product is designed for children, privacy and safety must be handled carefully.

MVP Requirements

- Collect only necessary child information
- Avoid collecting sensitive personal details
- Allow parent involvement in setup
- Keep parent-facing data simple and educational

- Avoid public sharing by default
- Avoid open chat features in MVP
- Avoid child-to-child communication in MVP
- Review legal requirements for child privacy before launch

Data Collection Principle

Collect the minimum information needed to personalize the learning experience.

24. Accessibility Requirements

The product should be accessible for young children and parents.

MVP Accessibility Needs

- Large buttons
 - High contrast text
 - Simple navigation
 - Clear instructions
 - Minimal reading burden for younger children
 - Visual cues with text labels
 - Optional no-music choice
 - Avoid flashing effects
 - Mobile and tablet support
-

25. Success Metrics

Child Engagement Metrics

- Percentage of users who complete onboarding
- Percentage of users who complete first game
- Average time spent in first game
- Return rate after first session
- Number of games completed per child

Parent Engagement Metrics

- Percentage of parents who view summary
- Percentage of parents who return to dashboard
- At-home practice suggestion clicks or views
- Parent account return rate

Learning Metrics

- Skills identified as strengths
- Skills identified as opportunities
- Improvement after repeated sessions
- Difficulty progression over time

Product Experience Metrics

- Drop-off point during onboarding
 - Most selected themes
 - Most selected character styles
 - Music preferences
 - Game completion rates by age range
-

26. MVP Acceptance Criteria

Landing Page

The landing page is complete when:

- The logo appears clearly
- The app description explains the home-to-school bridge
- The start button begins onboarding
- The parent value is visible

Onboarding

Onboarding is complete when:

- The user can answer name, age, theme, vibe, music, and style questions
- Each answer is stored
- The user can move forward and backward
- The child sees one question at a time

World Reveal

The world reveal is complete when:

- The selected character appears
- The selected name appears
- The selected theme affects the environment
- The selected vibe affects the presentation
- The selected music preference appears

- The selected style appears
- The user can start the first game

First Game

The first game is complete when:

- The game uses the child's age range
- The child can answer questions
- The app tracks correct and missed answers
- The child receives encouragement
- The game ends with a completion screen

Parent Summary

The parent summary is complete when:

- It shows the game played
 - It identifies at least one strength
 - It identifies at least one opportunity
 - It provides one at-home practice suggestion
-

27. Suggested MVP Build Order

Phase 1: Static Layout

- Landing page
- Onboarding screens
- World reveal screen
- First game screen mockup
- Parent summary mockup

Phase 2: Basic Interactivity

- Store onboarding answers
- Update room preview based on selections
- Launch first game based on age
- Track answers

Phase 3: Learning Summary

- Calculate correct and missed answers
- Generate strength and opportunity labels
- Show parent summary

- Suggest one at-home activity

Phase 4: Polish

- Improve child-friendly copy
 - Improve visual theme changes
 - Add simple rewards
 - Add mobile responsiveness
-

28. Future Roadmap

Version 1: Foundation

Build the first complete learning journey.

Includes:

- Landing page
- Guided onboarding
- Character selection
- Theme-based room reveal
- First learning game
- Parent summary

Version 2: Expanded Personalization

Add more customization and better engagement.

Includes:

- More characters
- More room details
- More game types
- Character reactions
- Simple reward system
- Returning user room

Version 3: Adaptive Learning

Make the app smarter based on gameplay.

Includes:

- Skill tracking over time

- Game recommendations
- Difficulty adjustments
- Parent dashboard history
- Learning streaks
- Personalized practice missions

Version 4: Full Learning World

Bring the larger vision to life.

Includes:

- Dynamic environments
 - Character growth
 - Unlockable items
 - Rich animation
 - Music integration
 - Voice guidance
 - School readiness insights
 - Teacher or classroom mode
-

29. Key Product Statement

Personalized Learning World helps children build a world that feels like theirs, then uses gameplay to understand how they learn. It gives parents a window into their child's growth as they move from home learning into school, without making the child feel tested or watched.

The child gets a companion.

The parent gets connection.

The app becomes the bridge.

30. Final MVP Summary

The first version should focus on one complete journey:

1. Child and parent arrive on the landing page.
2. They begin setup together.
3. The child enters a name.
4. The parent or child selects age.
5. The child chooses character, theme, vibe, music, and style.

6. The app reveals the personalized world.
7. The character follows the child into the first game.
8. The game tracks performance.
9. The child receives encouragement.
10. The parent receives a simple strengths and opportunities summary.

This protects the full vision while keeping the first build clear, focused, and achievable.
